Guidelines for Demo Task

Full Stack Developer / Python Developer / Frontend Developer

Task: Task is to create a home page for a recruitment startup. This portal will be used by companies in India and worldwide for Hiring software engineers, Product Managers, Data Scientist etc. Please have a look at the 2-3 features from the below mentioned reference website and develop it for the demo purpose. You have to make one page (home screen) for the frontend and 2-3 featuers for the backend. You don't need to make a whole website. **You can use ChatGPT for writing codes.**

Tech Stack -
- For the front end you can use HTML, CSS, JavaScript, Bootstrap, React JS etc.
- For the backend you have to use Django / Python for the development. No other programming language will be considered.
- Create database by using MangoDB / mySQL/ Firebase
- If you are for 'Frontend Development, you don't have to work on Backend features.

Submission -
- You can upload the code on some free hosting portal like Gituhub or other similar portal and share the link with us. Or
- Do the screen recording of the Frontend / LIVE website & share the video with us along with the complete file.
- Write the subject line as per your application or interest from Full Stack Developer / Python Developer / Frontend Developer
- Upload your work on your google drive & share the link with us to coursify.india@gmail.com
